I have been a Web Developer and Programmer since 1997 and have worked as both full time and as a contractor. Those very different environments have given me many different skills and experiences. With contracting, I learned how to adapt. Every company has their own way of doing things and in a short time I need to fit in and be able to code. With a full time position, it tends to be the number of 'hats' that I am required to wear that becomes the challenge on top of how I fit in the team and the work that is required.

Even with all that experience, I am not a 'guru'. Programming, working with code, and building something exciting and robust can be the most fun thing and I can 'lose' hours trying to figure out one more coding problem. I may not know all the tricks or even all the buzzwords in the industry, but I am proud of my ability to adapt and use my past experience and varied skills to tackle any challenge, but I am not an expert in any one skill. I know a lot of things from different points of view. I am trying to learn new things and remember what I have forgotten.

Core Technical Skills

- Angular
- C#
- Java
- ASP.Net
- HTML
- JavaScript
- MS SQL Server
- T-SQL
